## CHINCH BUGS CAUSE HEAVY DAMAGE

State Entomologist Now Gives Directions For Combatting This Destructive Pest.

Reports of heavy losses as the result of the ravages of the chinch bug in various sections of the State have reached the A. & M. College. William Newell, State Entomologist, with headquarters at the Texas Experiment Station, A. & M. College, has issued the following statements concerning the chinch bug:

"The adult chinch bug is about one fifth of an inch long, with a black body. Its white wings are folded over each other on the abdomen, and are marked by a small black triangle on their outer margins. The young bugs are yellowish or bright red, marked with brownish black, becoming darker as they grow older.

"During the winter the bugs live in clumps of grass, in the butts, and in old shocks of corn, or under whatever rubbish is available. In the early spring they assemble in the fields of grass and small grain. Soon they pair and the females start to lay their eggs, each laying 100 to 200. The eggs are laid about April 1 and hatch in from seven to ten days. As the young ones grow they do serious damage to corn, grass or small grains, upon which they feed, to become full grown about July 1. These adult bugs then give rise to another generation which matures about the first of September. Though the adults have wings they do not fly, but travel from field to field on foot.

## Chinch Bug Disease.

Experiments have been made with a fungus disease in killing the chinch bugs. Though the results are satisfactory in wet seasons, it can not be relied on to check the pest in dry seasons when its injury is worse. Past experience has shown that the weather in Texas is invariably too dry for the disease to propagate itself among the insects. Dry weather is favorable to the chinch bug but unfavorable to the disease. If the weather is wet enough for the disease it is usually wet enough to hold the chinch bug in check.

## Winter Destruction of the Pest.

The burning over of grass land, and the grass along fences, hedges, and rows, as soon as possible in the fall, is of prime importance to destroy the bugs after they have gone into hibernation. The removal of all corn stalks from the field, or where the bugs are very abundant, raking out the butts and burning them will rid the fields.

The farmers are likely to overlook the first adult bugs when they come out of winter quarters early in the spring. In fact, unless he is extraordinarily observant, he may not notice them until after the first eggs

hatch and the first generation of the summer is partly grown. An early attack on the over-winter adult bugs is equivalent, in results, to destroying 100 in May or June.

## Spraying.

If the chinch bugs are scattered over the field generally they are hard to deal with and the only measure which can be recommended generally is to spray with a knap-sack sprayer or compressed air sprayer around the base of each corn stalk with a fifteen per cent kerosene emulsion. The kerosene emulsion is not poisonous, but kills the bugs by contact. It is therefore necessary that the applications be thorough to be efficient.

The ingredients of the emulsion are kerosene, soap, and water in the following proportions: laundry soap, one pound; boiling water one gallon; kerosene, two gallons, a low grade of kerosene, which is cheap, is as satisfactory as a higher priced illuminating oil, and if desired, fish oil soap (also called whale oil soap), may be substituted for the ordinary laundry soap. The soap forms a coating around each minute particle of oil, "emulsifying" and permitting of its then being dissolved or diluted with water. Both the soap and oil are active agents in the destruction of the insect.

To prepare the emulsion, shave one pound of ordinary laundry soap or soft soap into one gallon of soft water, have the water boiling hot. As soon as the soap is all dissolved remove the solution from the fire and add two gallons of kerosene. At once agitate the material violently. Continue for

at least five minutes. This is best done by the use of a bucket spray pump, turning the hose or nozzle back into the bucket or tub so that the material is constantly pumped vigorously through the pump. In a few minutes a smooth, creamy emulsion is formed, without any free oil. This will get thicker as it cools, but if properly made no free oil will separate out. This is a stock solution and will keep indefinitely if shielded from the air. (Do not try to make the emulsion by stirring with a paddle, or similar means, for this does not cause sufficient violent agitation to thoroughly emulsify the oil.) To make a fifteen per cent mixture add three and one-half gallons of water to one gallon of stock solution.

## Preventing Spread of the Bugs.

If the bugs are confined to one part of the field, or to one field, they will presently migrate to other portions and in this event measures must be taken to stop them. The easiest way is to clean off a strip all around the field, or around the infested portions. This strip should be two or three feet wide and clear of all vegetation. A stream of road oil is then poured around the middle of this strip. This may be done by means of a watering pot, without the nozzle, or with a pitcher as one walks around the strip.

Another way of stopping the bugs is to plow a furrow with rather deep dusty sides so that the bugs will fall into this and have difficulty in getting out. When the bugs are in it they can be destroyed by drawing a heavy log along the bottom of the fur-

An Outdoor 4<sup>th</sup> of July

Up in the morning and off to the country for a quiet day under the trees—away from the noise. You can't beat that kind of a Fourth, with the green all around you and good comradeship to make the day a real event of the year. Then there's the lunch on the grass with good things to eat aplenty. You'll need a good supply of

## SUPREME Food Products

because they're all quality and full of tasty flavor that you'll find matching up to every claim made for them. Put a good supply of Supreme Boiled Ham in the basket—with plenty of Supreme Eggs, hard-boiled. For the finishing dainty, be sure to take a berry pie—juicy and sweet and crispy-crust, shortened with Supreme Lard. For the home table, try Supreme Ham, Supreme Bacon, Supreme Butter, Supreme Canned Meats, Supreme Cheese.

Thousands of dealers sell Supreme Food Products because they know they're good. Find one of these dealers. He's a good man to patronize.
